

Recovering Debug Information from Randomized Code Movement

Steven Neisius, UC Irvine
SoCal PLS, Fall 2013

Motivation

- * Many projects have applied diversity to binaries

- * A. Homescu, S. Neisius, P. Larsen, S. Brunthaler, and M. Franz; "Profile-guided Automated Software Diversity," in 2013 International Symposium on Code Generation and Optimization (CGO 2013), Shenzhen, China; February 2013.

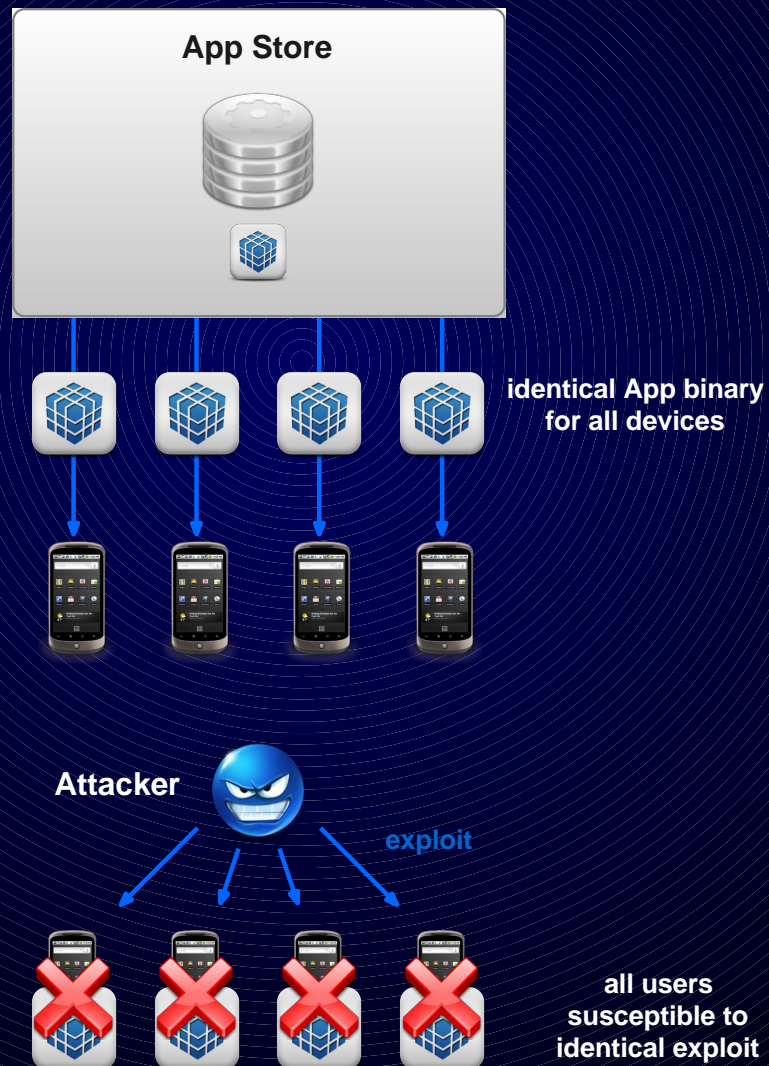

- * Richard Wartell, Vishwath Mohan, Kevin W. Hamlen, and Zhiqiang Lin. 2012. Binary stirring: self-randomizing instruction addresses of legacy x86 binary code. In Proceedings of the 2012 ACM conference on Computer and communications security (CCS '12). ACM, New York, NY, USA.

- * Etc...

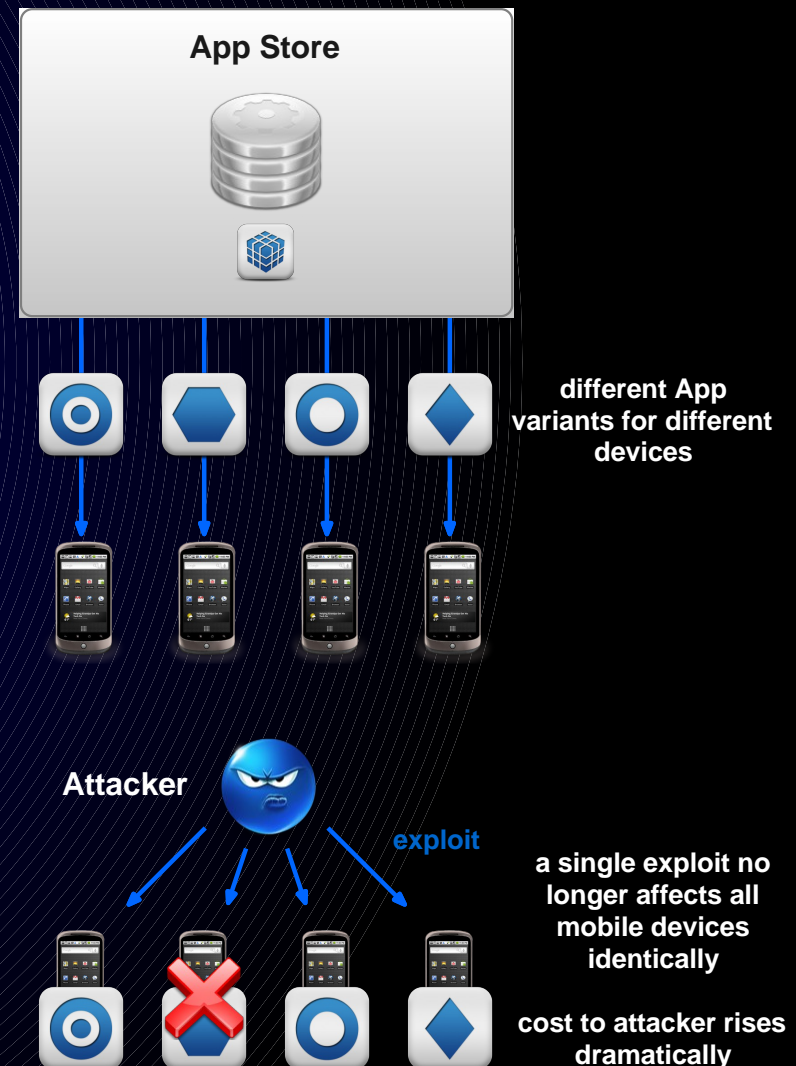

- * None have explored crash reporting

Diversity In A Nutshell

Current Practice

With Software Diversity

Code Movement Transformations

- * NOP Insertion

- * Schedule Randomization

- * Function Layout

Our Approach

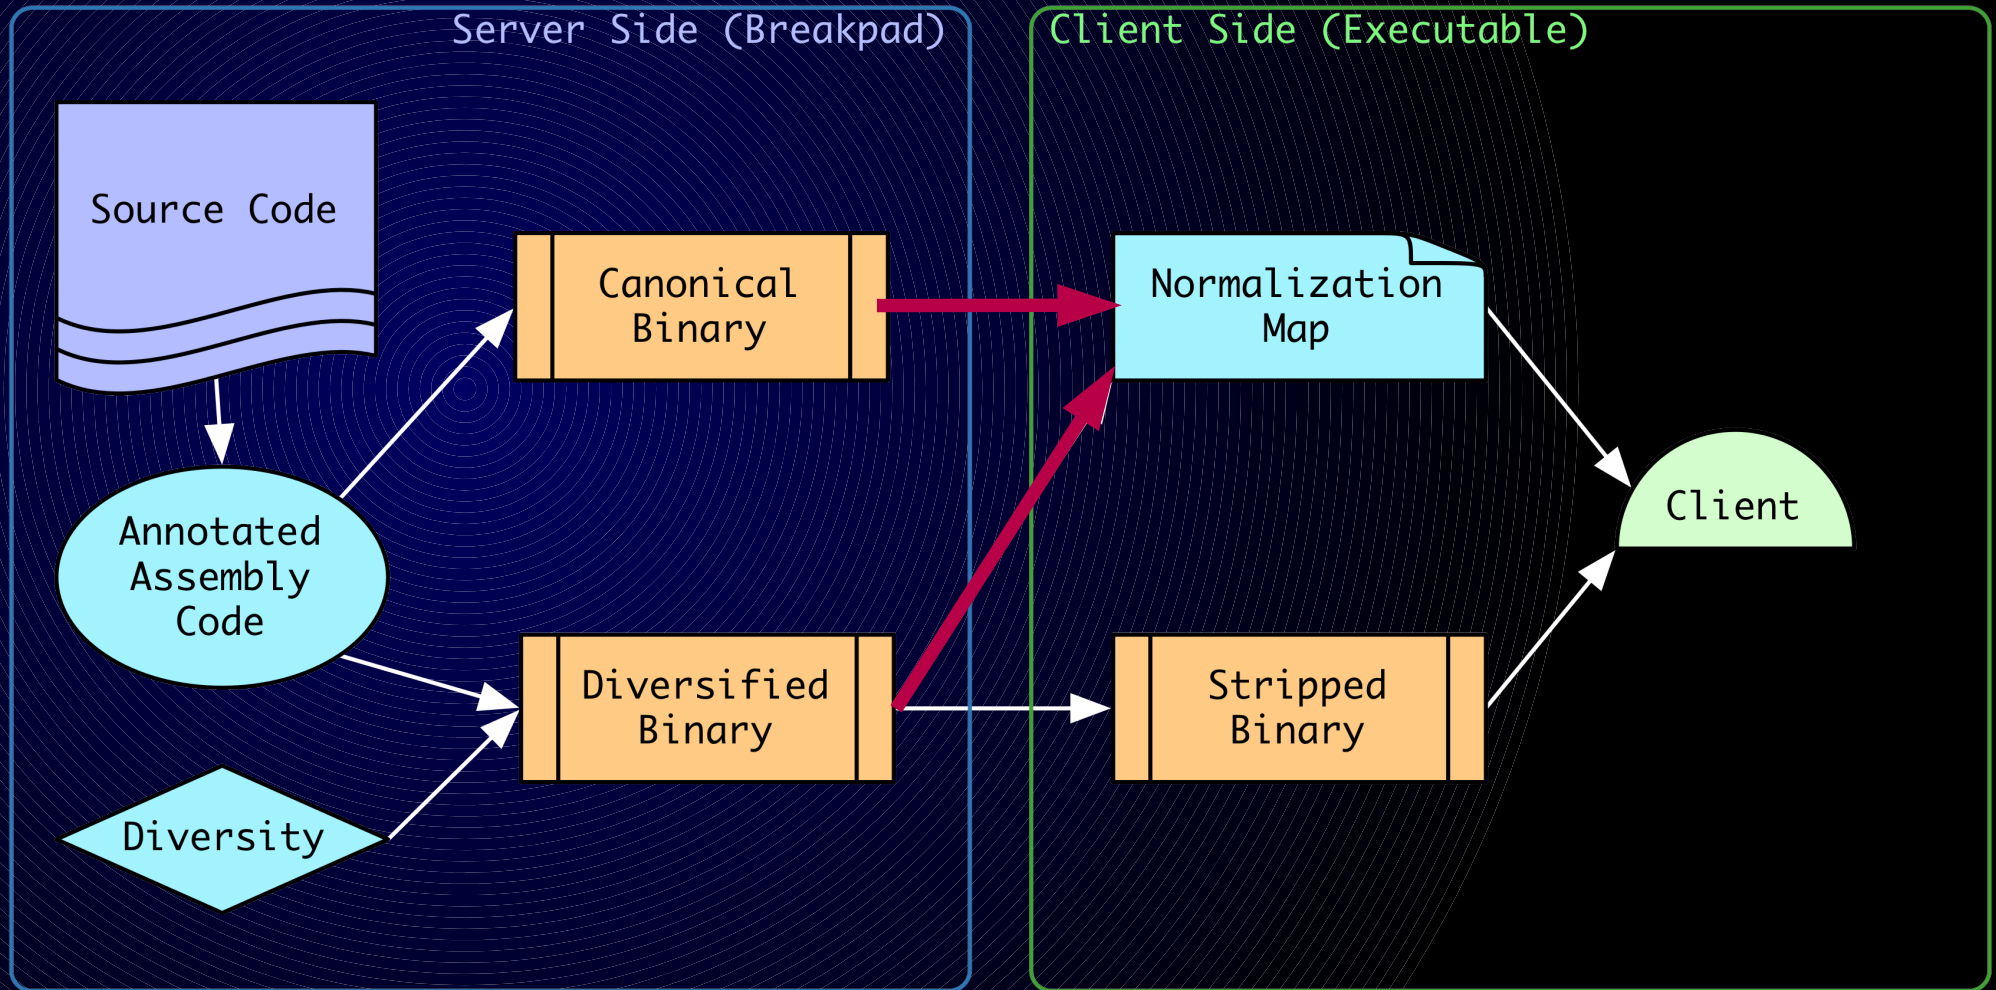

Our Approach

Our Approach

Our Approach

Diversified Crash Reporting

Normalization Locale

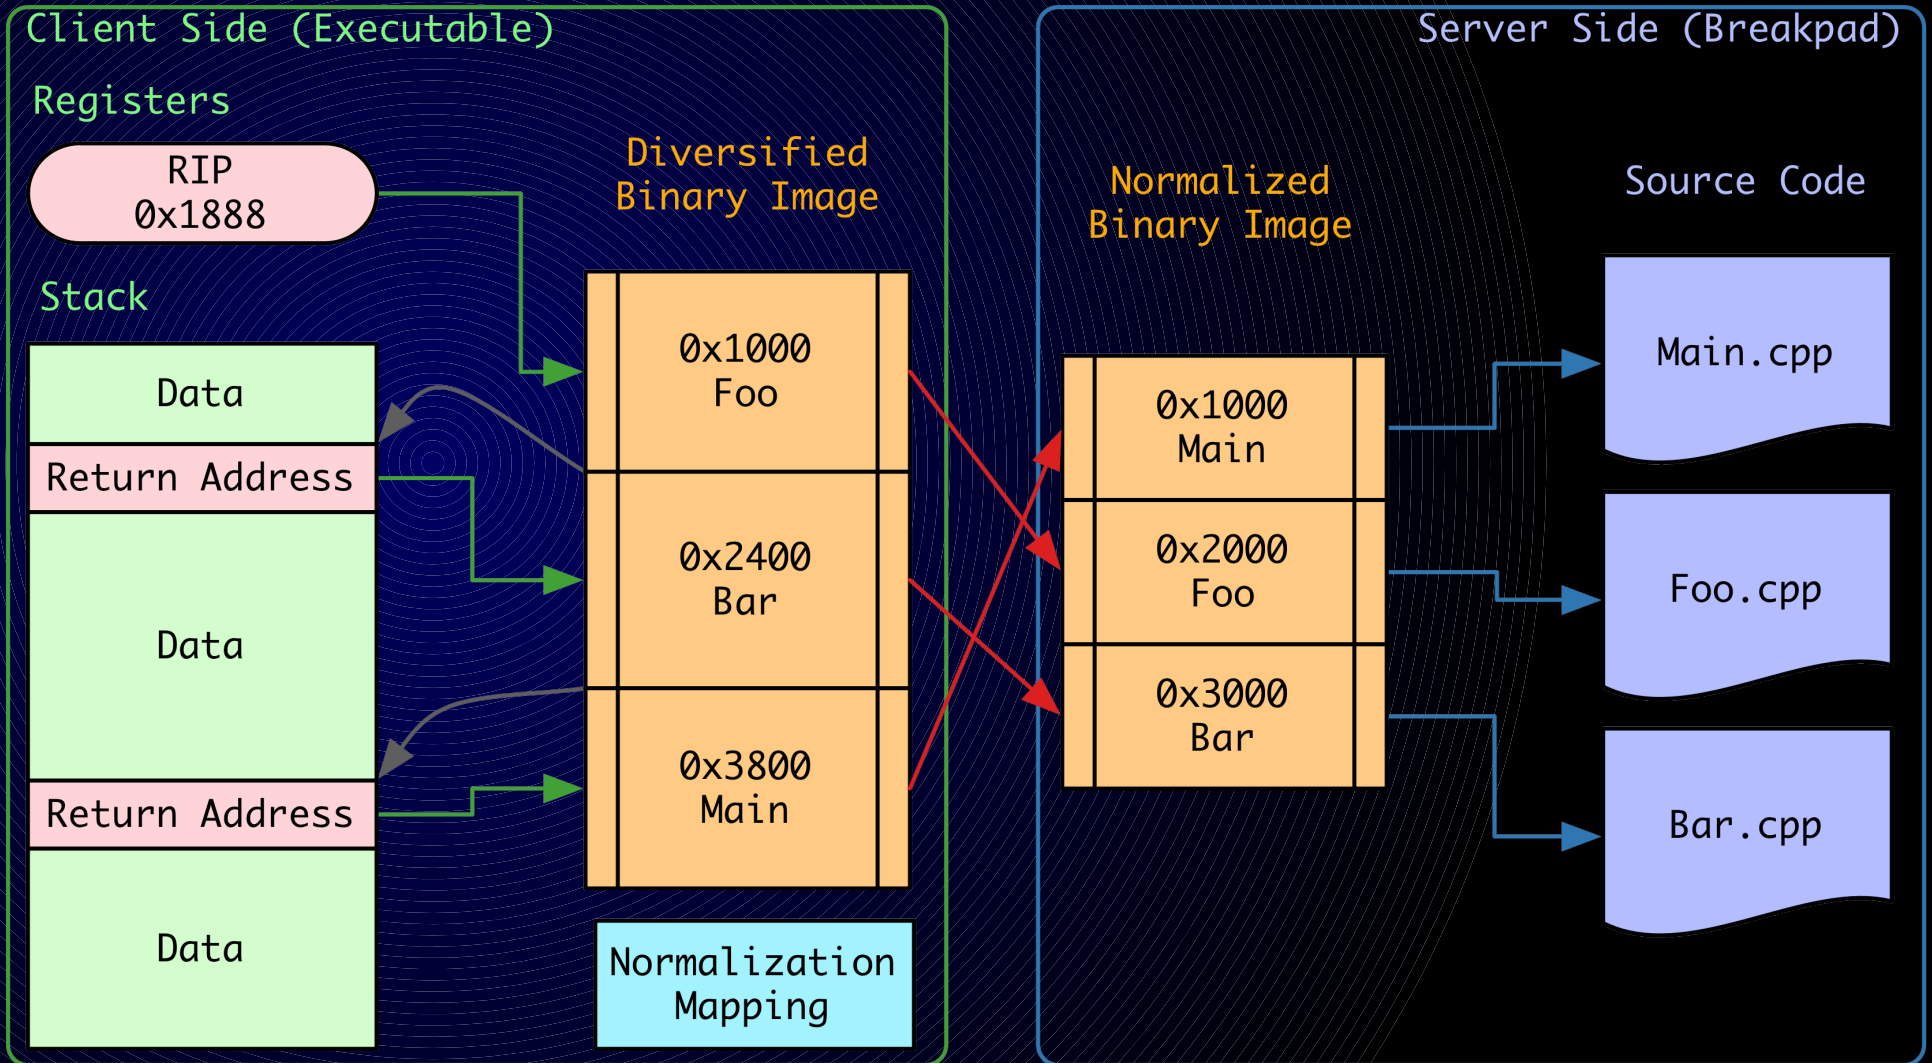

Client

- + Privacy
- + Transparency
- More work

Server

- + Frame info
- More bandwidth
- Modify tracker

Normalization Method

Results

- * Successfully stackwalk a diversified crash dump as if it was created by the canonical version
- * Supports any code movement transformation that operates on assembly code

Future Work

- * Optimize mapping time and size
- * Mapping for register and stack randomization
- * Patching and updating

Questions?

Thanks!
